

Combination Lock A152

Product Description

The A152 4-wheel combination lock has 10,000 unique code combinations and an automatic “code scrambling on entry” feature to protect the user code from being viewed by a third party. The end user can set and change their own 4-digit entry code and the lock also has a simple key override which allows a manager to discover the code currently in use.

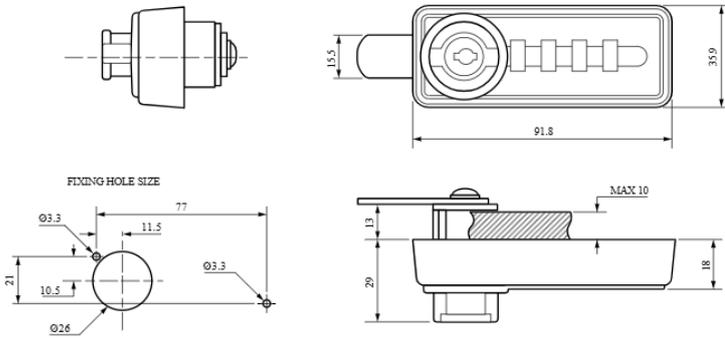

- **Code Combinations:** 10,000
- **Standard finish:** Black, silver (mazak lock housing and knob)
- **Panel thickness:** 0.5 - 22mm
- **Maximum axial load on lock:** 30kg
- **Cam thickness:** 2.0mm, 2.5mm and 3.0mm
- **Lock fixing:** 2 x M3 screws
- Automatic code scrambling by lock operation
- Codefinding and emergency opening via master key
- Vertical, left and right hand fixing
- Surface mount or flush fit
- For cam piercing nr.7
- Suitable for indoor use only (no IP-protection)
- Cam retained in closed position
