

Saros Auto-Scramble Combination Lock 2850

Product Description

Auto-scramble functionality paired with our 10-disc barrel technology makes Saros the most secure mechanical combination lock on the market.

Secure

- 4-digit access code auto-scrambles once the lock is opened and closed to prevent the code being remembered/used by unauthorised persons.
- High picking resistance thanks to the steel tumblers within the 10-disc barrel.
- Unique barrel anti-attack feature renders the lock inoperable when attacked to prevent unauthorised entry to the locker.
- Anti-tamper design protects damage to the internal mechanism if wheels are held or forced.
- Patented code finder function allows emergency access in the event of lost or forgotten codes.
- Twist resist fitting options available for added security and durability in the event of abuse or attack. This feature also prevents damage to doors from abusive use.

Build Quality

- All components designed and manufactured in our UK facility.
- Precision manufacturing ensures effortless operation without the need for lubrication.
- Zinc die cast construction with die cast position indicators for ease of use.
- 20mm and 30mm housing length available to suit door thicknesses up to 32mm.

Feature Rich

- Manufactured to fit standard industry footprint 16mm x 19mm allowing for retro-fit solutions across our existing mechanical and digital range.
- Full range of cams available to suit most applications.
- Available in 3 standard powder coat finishes with barrel painted to suit.
- Customisable logo area for customer logo application or indication of locker sequential numbers.
- 4-wheel combination provides for 10,000 user codes.
- Pre-entered user codes available on request.

Support

- Euro-Locks have a dedicated support team with many years' experience in the locking systems industry. From initial order enquiry through to final installation we are here to help.
